

# S708

## EVERYTHING BUT THE SOLVENT

## EXTERIOR GRADE STEEL FIRE PROTECTION

### Away with solvent-based systems

Introducing Nullifire's NEW S708 water-based intumescent coating for faster, safer protection of internal and semi-exposed steelwork.

Until now solvent-based protection of external steel was the only option.

S708 is the new water-based eco-friendly replacement. It can be fully exposed to the environment for up to 6 months during construction without a top seal.

### In with an eco-friendly solution

S708 has been developed to replace solvent-based products on and off-site. It is fully tested to BS Standards, including forthcoming CE Markings (ETAG 018 Part 2 2006).

S708 is an enviro-responsible product. It contains no toxic solvent-volatiles that can harm people or environment.

S708: delivering all the benefits of solvent based coatings but without the solvent.

### S708: external solvent-free system

- 30 and 60 minutes fire protection
- Single coat application
- No special on-site storage needs
- Low waste cost and easy disposal
- No top seal needed for C1 & C2 buildings
